EDUCATION

Johns Hopkins University <i>Master of Science in Financial Economics</i> GPA: 4.0 / 4.0 Coursework: Financial Economics, Microeconometrics, Financial Intermediation, CGE Modeling	Washington DC, US 08/2025 – Present
Shandong University <i>B.A. Finance (Banking & Securities) B.Laws — Dual Degree GPA: 3.8 / 4.0</i>	Shandong, CN 09/2021 – 06/2025
University of California, Santa Barbara <i>Exchange Program — Statistics & Mathematical Finance</i>	California, US 04/2024 – 09/2024

EXPERIENCE

State Street <i>Data & Analytics Intern — Global Delivery</i> - Built end-to-end data capture and aggregation pipelines in Python and SQL consolidating 600+ operational checklists into a centralized database with automated validation and QA protocols; replaced manual Excel workflows, reducing processing time and improving data quality control by ~30%. - Designed and maintained Power BI KPI dashboards integrating multi-source operational datasets for senior management; established documentation standards for reproducibility and data transparency across cross-regional teams. - Identified automation and control gaps across business functions; delivered data-backed process risk assessments to leadership to support resource allocation decisions and execution oversight.	Hangzhou, CN 01/2025 – 07/2025
Huron Consulting Group <i>Consulting Analyst Intern</i> - Conducted quantitative analysis and data synthesis across consulting engagements; built structured datasets and analytical models in Excel to support client deliverables and team workflows. - Developed data-driven frameworks to support project scoping and recommendation development; translated analytical outputs into visualizations and structured reports for client and internal stakeholder review. - Collaborated with project teams to gather, clean, and analyze client data; documented analytical methodology and key assumptions to ensure reproducibility and auditability of outputs.	Washington, DC 10/2024 – 02/2025
Huatai Securities <i>Fixed Income Research Intern — Infrastructure Bond Dept.</i> - Constructed SQL-based pipelines to convert 100+ regulatory and policy announcements into structured event indicators and sector-level datasets; assessed policy shock impacts on bond yields using event-study comparisons with robustness checks. - Conducted valuation and credit assessments on infrastructure bond issuers; translated quantitative outputs into structured analytical reports and investment memos for senior analysts, linking macro-fiscal dynamics to actionable insights.	Shanghai, CN 06/2024 – 08/2024
Institute of Green Investment (IGI), CUF <i>Research Assistant</i> - Monitored ESG and climate-finance regulatory frameworks; synthesized policy updates into structured intelligence briefs and tracking datasets covering international standards and domestic green-finance guidelines. - Authored a 5,500-word industry report on China's energy storage sector analyzing regulatory incentives, cost trends, and investment feasibility; report reached 10,000+ readers and won Gold Prize in a national innovation competition.	Beijing, CN 11/2022 – 01/2023

PROJECTS

Financial Derivatives and Firm Value — Panel Econometrics - Constructed a 14-year firm-year panel of 3,847 non-financial China A-share firms (61,883 observations) in Stata by hand-collecting derivatives disclosures from annual reports and merging with CSMAR financial databases. - Estimated firm fixed-effects regressions linking derivatives use to firm value (industry-adjusted Tobin's Q); conducted robustness checks including PSM, lagged specifications, and alternative DVs; found stronger valuation effects among SOEs than private firms.	01/2025 – 05/2025
Credit Application Scorecard — Risk Modeling - Developed a credit underwriting scorecard in Python using logistic regression with WOE transformation and IV-based variable selection; implemented monotonic binning and missing-value handling across a parsimonious 6-variable model spanning three underwriting dimensions (ability to pay, willingness to pay, loan terms). - Converted the logistic model to a points-based scorecard with custom PDO scaling; evaluated rank-ordering via KS statistics and confusion matrices on training and validation samples, achieving KS = 0.33 on the held-out validation sample; conducted score cutoff analysis linking predicted PD thresholds to approval rates and portfolio bad rates.	01/2026 – 03/2026

SKILLS

Advanced in: SQL, Python (Pandas, NumPy, Statsmodels), R, Stata, EViews, Power BI, Excel (Advanced/Macros, Power Query, Pivot Tables), Bloomberg Terminal, Wind, Git

Intermediate in: Panel Data Econometrics (FE, IV, DID, PSM), Time Series Analysis, Event-Study Design, CGE Modeling, Credit Risk Modeling (WOE/IV, Logistic Regression, Scorecard)

Domain: Fixed Income Valuation, Credit Analysis, ESG/Sustainable Finance, Investment Memo Writing, Data Pipeline Design, Dashboard Reporting, KPI Frameworks
